

WHAT REALLY HAPPENED ON 9/11?

See www.vt911.org for more info

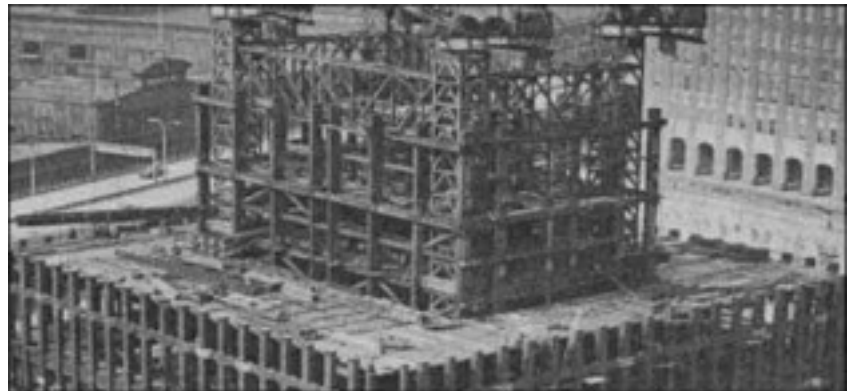

1) We were told that World Trade Center Building 7, a modern, 47-story skyscraper that was not struck by any aircraft, collapsed as the result of fire, something that had never before happened. Here is WTC 7 on the afternoon of 9/11 ----->

Where are the raging fires? How did this building collapse suddenly, symmetrically, and at free-fall speed (as if through thin air) into its own footprint, with the structure on the rooftop falling first? What (other than a controlled demolition) explains the molten steel found at the subbasement levels after 9/11? The 9/11 Commission Report ignored the collapse of Building 7. Why? The National Institute of Standards and Technology still can't explain the collapse. (Google "Shyam Sunder New York Magazine") Why did Larry Silverstein, WTC leaseholder, admit that WTC 7 was "pulled"? (Google "Larry Silverstein pull it")

2) We were told that the World Trade Center North Tower and South Tower collapsed because the trusses beneath the floors were weakened by high-temperature, raging fires, causing the floors to pancake down.

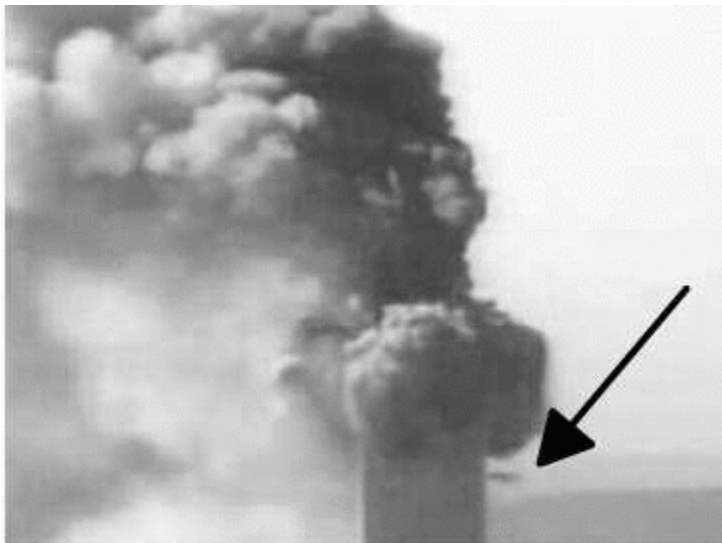

←----- **Does this look like floors pancaking down on each other, or does it look like the top 20 or 30 floors falling to the side, as one block? Immediately after this photograph was taken, this chunk of building apparently exploded into dust and fell straight down with the rest of the building, instead of continuing down to the side, as the laws of physics would require. How did that happen?**

What happened to the cores ----->
of the towers, consisting of 47 steel box columns? What cut them into small pieces and brought them down?

If there were high-temperature, raging fires, how is ←----- this person standing in this hole caused by the 757? Where are the fires? How could there have been high-temperature fires when most of the jet fuel exploded outside of the towers? Actually, government scientists admit that the jet fuel would have only served to ignite the office contents. Neither office contents nor jet fuel can burn hot enough to melt steel, so what caused the steel to give way? Why are the FEMA, NIST and 9/11 Commission reports contradictory?

What is causing these ejections (there were many) of pulverized debris in areas far below the area struck by the plane, and ahead of the collapse? How were the buildings and contents pulverized into dust?

Other than a controlled demolition, what can explain the eyewitness testimony of first responders and the seismic and photographic evidence clearly establishing that multiple, massive explosions preceded the collapses?

How did the antenna (i.e., the center core) of the North Tower start falling before the floors or the exterior walls started to fall?

3) We were told that the Pentagon was struck by a Boeing 757.

Where is the Boeing in this photo? →

If there is nothing to hide, why won't the Pentagon release video footage seized from across the highway immediately after the impact?

If the Boeing broke apart into tiny little pieces, how did it pierce through three of the Pentagon's rings and leave this ↓ perfectly round exit hole? How did it suddenly disappear after making this hole? If the Boeing was vaporized in a raging fire, how did it pierce through the rings and make this hole? How did the Pentagon collect fingerprints or DNA samples of the victims (not vaporized) if the Boeing was vaporized?

Numerous prominent scientists and researchers have come to the conclusion that the official version of events of September 11, 2001 is contradicted by the physical evidence. See, for example, the Scholars for 9/11 Truth website at www.st911.org. The questions raised here are a tiny fraction of the questions ignored by our government.

Want to do something? We have copies of DVD's and other flyers for distribution, as well as links to other resources. Visit www.vt911.org.

YOUR help is urgently needed. We need people to spread the word, join us in planning events, and contribute funds.
